About Egyptian Survey Authority

ESA GIM Solution

About Egyptian Survey Authority

- The **Backbone** for supplying data to the Egyptian society.
- The **Only** governmental organization responsible for the coverage of Egypt with topographic maps
- Responsible for supporting national cadastre and land registration (In cooperation with Real Estate Office in Ministry of Justice)

ESA GIM Solution

ESA GIM Business Requirements

ESA GIM Solution

Challenges that can be overcome with the aid of ESA GIM

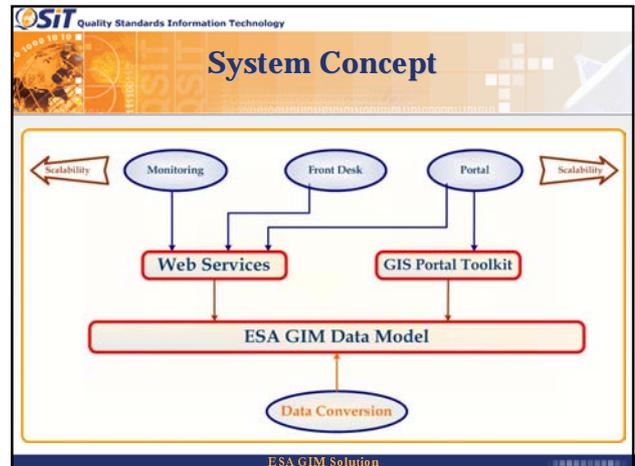

- Efficient Information Management
- Improve Competitive Power of ESA
- Establish unified access to Nation-wide Geo-Information
- Business Process Re-engineering
- System Scalability

ESA GIM Solution

OSIT Quality Standards Information Technology

System Concept

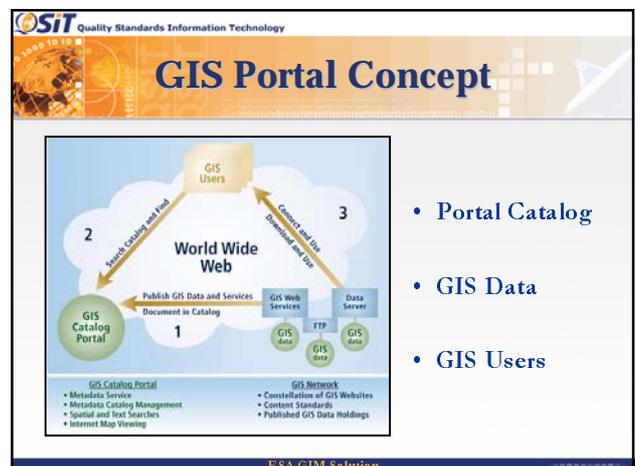

ESA GIM Solution

- OSIT Quality Standards Information Technology
- ## Data Model
- Building a data model is the foundation of the system
 - Merges cadastral and topographic data models into a rather simplified data model
 - Designed to support fast data access and inquiries
- ESA GIM Solution

- OSIT Quality Standards Information Technology
- ## Web Services
- Provide access to GIS content and capabilities – on demand , when needed , via any web-enabled application
 - Adhere to standards , such as SOAP / XML and WSDL
 - Allow integration with various entities , whether public or private
- ESA GIM Solution

- OSIT Quality Standards Information Technology
- ## GIS Portal Toolkit
- A toolkit developed by **ESRI** to support implementation of one-s top web sites for the discovery, transmission, and use of geographic data and mapping services
 - A technology and services solution for implementing spatial data infrastructure (SDI) portals.
- ESA GIM Solution

OSIT Quality Standards Information Technology

Metadata fuels the GIS Portal

- The GIS portal is based on a Metadata catalog that describes and references the geographic information at ESA
- Metadata is a summary document providing content, quality, type, creation, and spatial information about a data set
- Can be stored in any format such as a text file, Extensible Markup Language (XML), or database record.

ESA GIM Solution

OSIT Quality Standards Information Technology

What does Metadata Do?

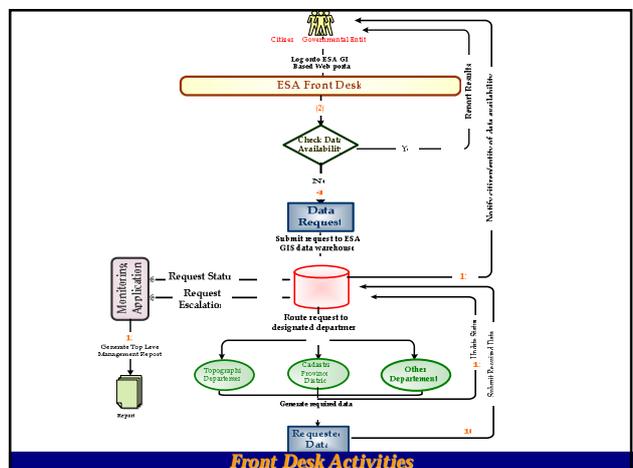

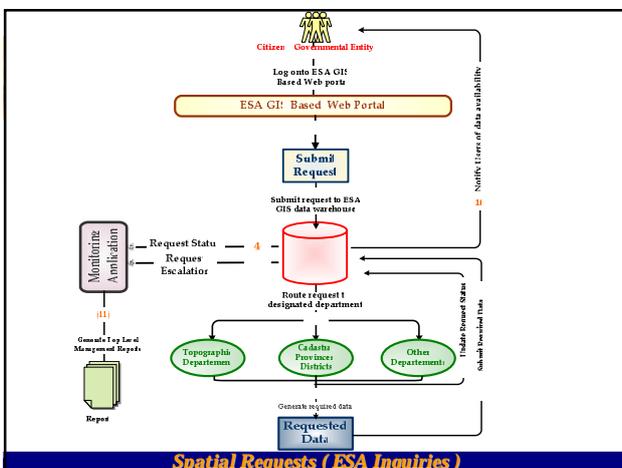

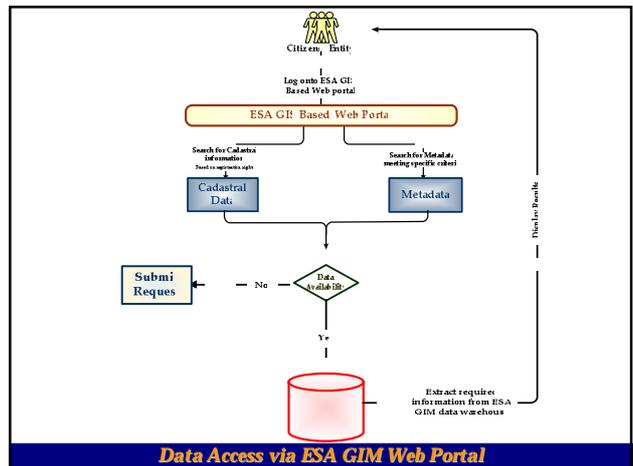

- Helps with finding information
 - Think of metadata as the information content that populates a Card Catalog
- Allows informed decisions about accessing and using the data
 - Legal statements regarding resources liability protect investment
- Data organization and provides management decisions of the resource

Title of Content:

Type of Content: Live Data and Maps (Ortho Image Service)

Latest Status: Service Running

Content Publisher: Egyptian Survey Authority

Publication Date: 06/11/2004

Content Descriptions:

Content Summary: This shows protected areas, road networks, municipalities as well as the location of links to remote sensed and other data. This map service is being updated on a daily basis in response to new information and data received on VRS/RSIS, including a wide range of remote sensed images, alongside the boundary data is infrastructure, administrative and resource related data.

Content Purpose: To provide quick and easy access to key boundary data to assist decision makers in taking informed decisions.

Content Themes: Environment and Conservation

Time Period of Content:

Acquired Date: 2004-03-04

Content Status:

Progress: Ongoing

Update Frequency: Daily

Spatial Coverage:

World Coordinate: 30 0000 E

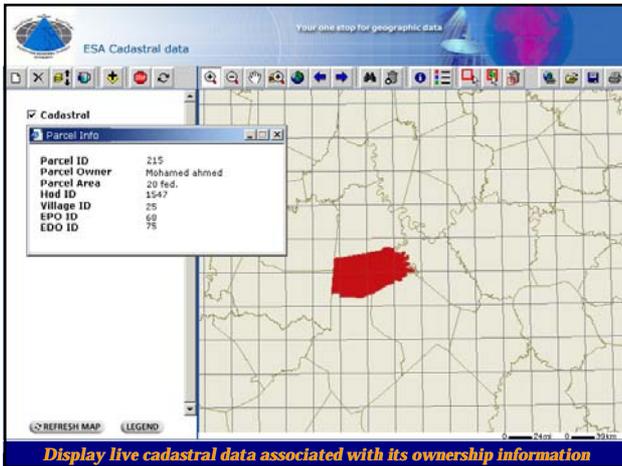

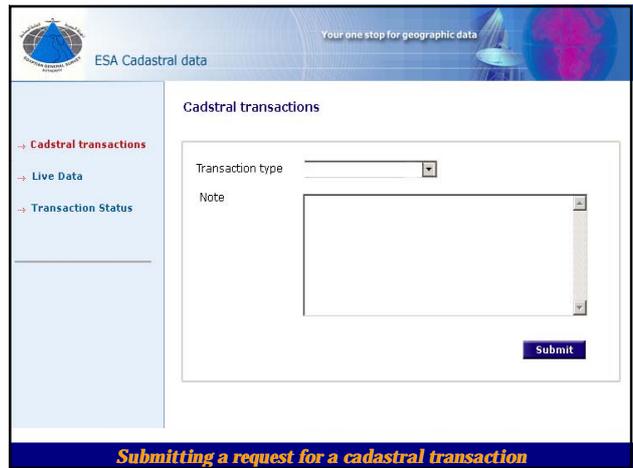

East Coordinate: 100.57020 E

North Coordinate: 31 00000 N

South Coordinate: 429.00000 S

Coverage Area: Greater Cairo

2. ESA Front Desk Web Based Application

- A spatially enabled application that serves ESA users
- Handles requests coming for the public or other governmental entities
- It avails the following spatial capabilities:
 - Map Display
 - Map Navigation

ESA GIM Solution

OSIT Quality Standards Information Technology

3. ESA Monitoring Web Based Application

- The monitoring application provides top-level management with tools for:
 - Following up the progress and status of requests
 - Provides an alert in the event of a problem
 - Perform basic analysis Generate various performance related reports
